Protection of outdoor wood with Cetol WF 771

CETOL WF 771

Wood underlines the natural atmosphere of the outdoor environment. Wherever wood is used, people feel at ease and the "living style" is upgraded.

In direct exposed outdoor areas wood can be open to the elements of extreme climatic conditions and needs protection.

Functioning of the Self-Stratifying®-binder

With Cetol WF 771 Sikkens offers you a special product with a high degree of UV protection and moisture resistance. This translucent product fills the wood pores using the Saturator-effect® and increases the durability. Flaking and blistering will not occur with this product. In Cetol WF 771 Sikkens use a binder making use of the Self-Stratifying® technology. The first component of this binder will take care of the filling of the pores and the perfect adhesion to the surface. The second binder component will take care of UV protection and resistance to moisture.

Properties

- Translucent primer, mid coat and top coat for outdoor wood
- For non dimension stable wood applications (soft-,hard-, and modified woods).
- Developed for use on wood in hard conditions like deck boards, garden furniture, etc.
- To be used as a one pot system
- Colours to be tinted by the Sikkens-Colour-Mix mixing system
- Pack size: 10 litres
- Saturator-effect® (fills wood pores and prevent early erosion)
- Optimal adhesion and film protection using the Self-Stratifying®- binder technology
- Broad application spectrum: Brush, Vacuum coater, Automatic spray/brush machine.
